

IQAir HealthPro 150 Air Steriliser

The Compact Allergy and Asthma Specialist

The IQAir HealthPro 150 offers the outstanding technologies for the control of airborne allergens, pathogens, chemicals and odours in a compact format for use in smaller residential and office environments.

The HyperHEPA® difference

Most air purifiers only filter particles larger than 0.3 microns in size, but 90% of all ultra fine particles are smaller than 0.3 microns. This means that most air purifiers are only filtering 10% of the particles in your air. IQAir's patented HyperHEPA filters are the first filters tested and certified to filter down to 0.003 microns with a guaranteed minimum efficiency of over 99.5%. This allows your HealthPro to capture the ultra fine particles that other air purifiers miss.

Micro-particle filtration

Eliminates micro-particles such as pollen, pet dander and mould spores.

Granular activated carbon adsorption

Eliminates volatile organic compounds (VOCs), which are responsible for odours.

Pelletized chemisorption

Destroys harmful chemicals, such as formaldehyde, by an oxidation process inside a chemically active alumina pellet.

HyperHEPA® filtration

Eliminates bacteria, viruses and combustion particles from vehicles and smoke, through a nano-fiber structure

IQAir HealthPro 150 Air Steriliser

APPLICATIONS

Allergen control

mould spores . Pet dander (cat, dog, etc.)
House dust mite allergens. Pollen. Molecular control
Volatile Organic Compounds (VOCs). Formaldeyde

Microorganism control

Bacteria . Viruses

Odour control

Pets . Musty smells. Cooking odours. Paint odours

Complex air pollution issues

General indoor air pollution
Moderate tobacco smoke
Wild-fire smoke and haze
Smog and industrial pollution
