

Isocal

(Mead Johnson)

An isotonic liquid diet providing complete balanced nutrition.

It contains ultratrace minerals and meets at least 100% of the RDIs for proteins, vitamins and minerals in 2000 Calories(1890ml). Can be fed as a tube feeding or orally. Isocal has a bland, unsweetened taste and is lactose free.

Dosage: Follow doctor's instructions. Isocal tube feeding may be given by continuous drip or at intervals. It can be initiated at full strength. However the rate should be adjusted for the comfort of the patients. For malnourished individuals or those who have not been nourished via the intestinal tract for several days, it is advisable to establish the regimen gradually; feed less than the caloric requirements on the first day.

Cautionary Instruction: Not for parenteral (Intravenous) use.
